

WE WILL NO LONGER SUPPORT OLD SERVOLAP

It's time to get into SEREL 2.0 & its SLDC GC

Serel has migrated to the replacement product of former Servolap and ServoX, the SLDC GC. This product, which is technologically up-to-date, performs the same functions as older models but also offers a greater range of possibilities.

Following these period of transitions, as well as the obvious problems of obsolescence and lack of availability of electronic components on electronic boards, Serel is unfortunately no longer able to track and supply spare parts for these older SLDC models.

Therefore, in order to anticipate problems relating to a failure of this aging hardware, we strongly advise our customers to migrate to our new SLDC GC. This will avoid major problems or even production losses in cases of systems failure.

SLDC-GC is more than a mere evolution of SLDC; it is a complete overhaul of the product. Consequently, while retaining the same functionalities, it makes it possible to offer new possibilities that better meet the requests of the customers (for example, optional digital connection to the PLCs of the customer via profibus, profinet, Ethernet IP, etc).

The user interface has not been forgotten as it now benefits from a control panel with a colour screen (LCD Control Panel) that can be removed from the cabinet to be installed in a more convenient location.

A supervision option is also available with this new generation of cabinet that benefits from a 15-inch touchscreen which is coupled to the Supervision Serel program.

ABOUT SEREL

- Our philosophy: "Save your money, material (fibres) and time (machine stops) in nonwoven industry"
- Have the best advanced regulation technological device of the market
- Don't worry about obsolescence anymore
- Get access to high level communication protocols (Profinet, Ethernet IP)
- Access to your menus and recipes thanks to new user-friendly interfaces and supervision 15-inch touch screen
- Configure alarms and outputs
- Facilitate remote assistance and maintenance

RETROFIT CONTENTS

- New Cabinet with Gauge Controller
- LCD Control panel or Touch Screen
- X-ray generator (30kV or 50kV)
- X-ray receiver scintillator tube (TSP)
- Motorization kit
 - Brushless motor, Servo drive, power supply
- Communication gateway
- Metal detection kit
- And many others...
